

VERSION WITH MARKINGS TO SHOW CHANGES MADE IN THE SPECIFICATION

The changes relative to the previous version of the second paragraph in page 4, lines 2 to 8, of the specification or paragraph(s) are marked up as follows.

The dental caries preventing combination means that the combination's effective components are IgY of present invention and antiseptic, the later is, at least, one of both potassium sorbate and sodium benzoate, the combination may be either a product for oral cavity use, for example, toothpaste, [buccal liquid] oral sucking tablet, mouthwash, or food, for instance, chewing gum, chocolate, ice cream, milk (powder), bean milk (powder), etc. Additive amount of the IgY usually is 0.05-0.2%, potassium sorbate or sodium benzoate is 0.005-0.02%.

REMARKS-General

1. Upon review of the original specification and in light of the observation of the Examiner noted in the above Office Action, the applicant has amended the original specification which is deemed to more clearly and distinctly describe the subject matter of the instant invention. No new matter has been included in the amended specification.

Respectfully submitted,

Raymond Y. C. Chan
